Seminar on Lacan and Organic Interpretation

By Shomit Sirohi

I. Parantheses

When I am in a room, and worsening and talking to people and chirping. It is a paranthesis in Lacan.

II. What does it mean?

It means in fact that I want a conversation to happen – I want to be evocative – I cannot let things go by like that. I want you to realise the truth – that I am a person who knows the truth.

III. What is Truth?

Apart from sciences, lived experience.

In that I once said stay close to lived experience, just that. In that work on lived experience – revolters argue it is history that guides one. But not for me. I follow just lived experience, and nowadays I argue that I have a science of lived experience – when I hesitate, it also means a thing or two. That the hesitation, creates a logic that we take a while, we step back, we move forward, we guage and we move again. But then this was ballet. It meant “Lost and insecure.” You found me, such aleatory messages. Which create a crisis, but we are aleatory, that next day I predict is simply a lack of tenor. Which is then found.

Judaism finds a tenor. Just remember that.
